

Submit your feed file!

Koongo Connector provides you *Feed Files* specific to all supported channels and marketplaces. *Feed Files* are XML, CSV or TXT files containing all your product data. That means once you set up given channel in Koongo interface you need to upload the generated *Feed File* using FTP or to instruct given channel authority to download the *Feed File* over HTTP protocol.

Usually, channels provide two ways how to upload product data:

- You copy Feed URL address and paste it into a channel (usually there is feed upload/adjustment section at merchant account of the channel). This address you may find in *Feed Preview*. For details see info above.
- You can upload *Feed File* using FTP. See [FTP Submission](#) for details.
- [API Submission](#) is available for some Channels e.g. [Beslist](#)

Note that for *Feed File* submission you need to have a merchant account with given channel authority. In *Feed Preview* click tab *Submission Manual* for further instructions on how to proceed with feed submission:

Koongo Connector - Feed Preview 'Google.com' (ID: 129) Back to profile grid Edit Profile Download File Go Offline

Submission instructions

1. **Almost Done**
Navigate to your Google merchant account or create a new account

2. **Copy and paste URL of the feed file into Your Google account (see Google submission manual)**
http://127.0.0.1:8080/m/15medaxvml/FeedExport/google/google_2600.xml

or adjust [FTP Submission](#)

Google How-To
Integration of your store with Google Shopping is easy, just follow steps below:
Download generated Channel File from [Channel List](#) in My Koongo.
Sign in to [Google Merchant Center](#) and click the Data feeds link. Make sure you've already registered your feed in your account.
Upload generated Channel File to Google. Watch Google Shopping explainer video and you are done!

How to upload a data feed using a text file

Manual product file/feed upload
You can manually integrate the product files/feeds generated by Koongo following these simple steps.
