Installation Procedure

Turn off Compiler

Before you start the installation process **turn off Magento compiler**. To do so, navigate to *System Tools Compilation* and disable compilation. You may turn it on after connector installation.

The screenshot shows the Magento Admin Panel interface. The top navigation bar includes 'System' and 'Advanced Newsletter'. The main content area is titled 'Compilation' and contains a table with the following data:

Compilation State	
Compiler Status	Disabled
Compilation State	Compiled
Collected Files Count	1
Compiled Scopes Count	1
Scopes Compilation Settings	default

A dropdown menu is open on the right side of the page, showing options: Ultimage Cache, Magestore Extensions, My Account, Notifications, Extension Conflict, Tools, Web Services, Design, Import/Export, Manage Currency Rates, Transactional Emails, and Custom Variables. The 'Design' option is expanded, showing sub-options: 'Deinstall' and 'Compile'. The 'Compile' option is highlighted with a red box.

If you don't take this step you get probably *Fatal error: Class 'Nostress_Nslexport_Helper_Data' not found in XXX on line XXX*.

- Solution for this error: re-compile Magento files.

Magento Connect Manager

The most convenient way how to install the connector is through *Magento Connect Manager*.

1. Log-in to your *Magento Connect Manager*, running probably on URL <http://www.your-magento.com/downloader/>.
2. Upload the downloaded tgz package, as shown on the screenshot below:

Settings

- Put store on the maintenance mode while installing/upgrading

Install New Extensions

- 1 Search for modules via [Magento Connect](#).

- 2 Paste extension key to install: [Install](#)

Direct package file upload

1. choose the downloaded tgz package

- 1 Download or build package file.

- 2 Upload package file: Soubor nevybrán [Upload](#)

Manage Existing Extensions

2. click Upload

[Check for Upgrades](#)

Channel: Magento Community Edition

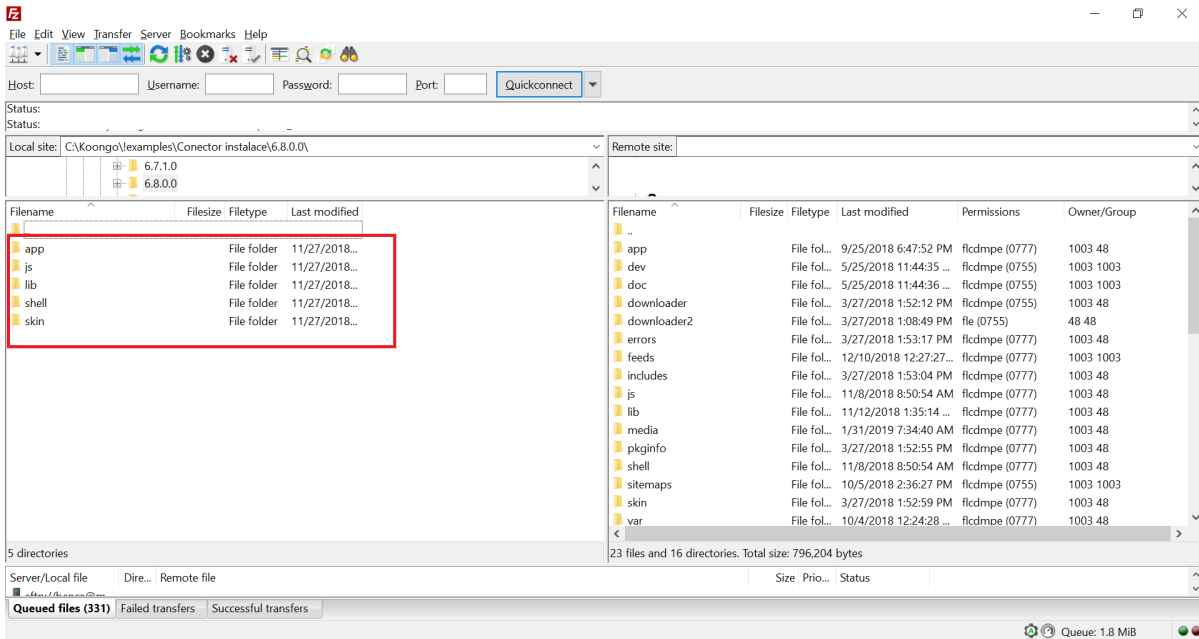

[Commit Changes](#)Clear all sessions after successful install or upgrade:

Package Name	Installed	Actions	Summary
Interface_Adminhtml_Default	1.6.2.0 (stable)	<input type="text"/> ▼	Default interface for Adminhtml
Interface_Frontend_Base_Default	1.6.2.0 (stable)	<input type="text"/> ▼	This is a Magento themes base
Interface_Frontend_Default	1.6.2.0 (stable)	<input type="text"/> ▼	Default interface for Frontend

Manual Installation

Unpack the downloaded tgz package locally and copy the content to your Magento installation folder using FTP or SSH/SCP client.

Please ignore the file **package.xml** in tgz package.

Post-installation Steps

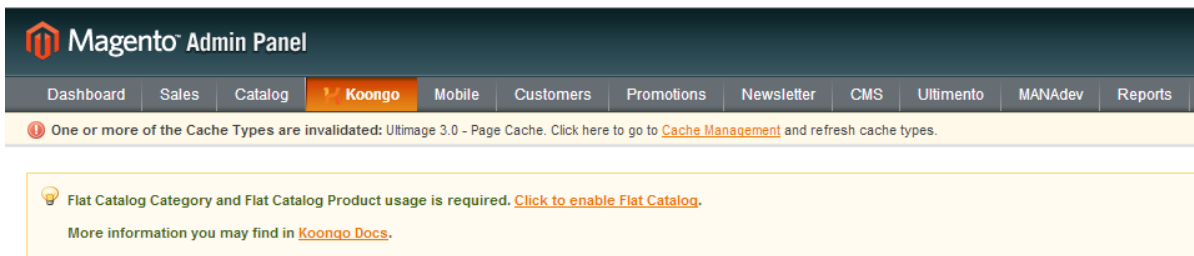

Cache Refresh

Navigate to *System Cache Management* and refresh ALL cache.

Log-out and Log-in

If you don't take this step, you may get *404 Not Found* error in *Koongo Connector*. Is is NOT a bug of connector but known limitation of Magento.

Enable Flat Catalog

Koongo Connector - profiles

Koongo Connector uses *Flat Product* and *Flat Category* data, so please make you sure you have enabled these two settings.

You can enable *Flat* by clicking on the link in the notice or navigate to *Configuration System Catalog Frontend*:

- Use Flat Catalog Category = Yes
- Use Flat Catalog Product = Yes
