Table of Contents

- 1 [Add New Export Profile](#)
 - 1.1 [Step 1 - Select Store view and Feed](#)
 - 1.2 [Step 2 - Export profile details](#)
- 2 [Export Profile Grid](#)

Add New Export Profile

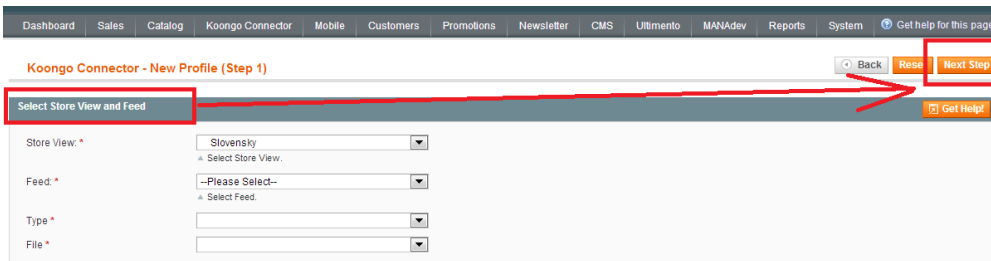

Step 1 - Select Store view and Feed

For export profile creation navigate to *Koongo Connector Export profiles* and then click on button **Add New Profile** in the right up corner:

Great! Now you are located in profile creation wizard that will guide you through the whole export profile creation process.

In the first step you have to set up several mandatory options, as you can see in following figure:

- **Store View** - Values form here selected *Store View* will be exported to final XML/CSV file.
- **Feed** - Select required feed or search engine. In the select are available only feedy that you have ordered and for which you have valid license key.
- **Type** - After you select *Feed*, you can define *Type*. Option *Type* defines the nature of exported data. Usualy the option *Product* is only one available. In some cases you can choose *Category*, *Stock* etc.
- **File** - Again, first you need to select *Feed* and then you can select *File*. Option *File* is in the majority of feeds available only one but in some special cases you can choose XML or CSV. This option defines the type of exported file.

Consequently, click on the **Next Step** button in right up corner and proceed with 2nd step of profile creation.

Step 2 - Export profile details

The second step in export profile creation process is a bit more complex and is thus divided into 4 steps represented by 4 tabs:

- [Tab 1: General](#)
- [Tab 2: Feed Details](#)
- [Tab 3: Product Filter](#)
- [Tab 4: Attribute Filter](#)

Save profile

At the end click on *Save Profile* button in the right up corner to save the export profile.

Export Profile Grid

Manage your export profiles for various channels at one place. For details see [Export Profiles Grid](#).

The screenshot shows the Magento Admin Panel interface for the Koongo Connector. The page title is "Koongo Connector - profiles". The grid displays the following data:
