3 Attribute filter

Filters under *Attribute filter* allow you to filter products based on products attributes.

Stock filter

Stock filter is powerful feature allowing you to export products based *Stock status* or *Qty* or both. Since *Koongo Connector 6.3.0.0* you have here two options:

- **Stock status dependence** - This option defines the conditions that given product must meet in order to be considered as *In Stock* or *Out of Stock*:
 - **Stock status only** - Product is considered to be *In Stock* if product attribute *Stock Availability* is set as *In Stock*. Otherwise, product is considered as *Out of Stock*.
 - **Stock status & Qty** - Product is considered to be *In Stock* if product product attribute *Stock Availability* is set as *In Stock* AND if product *Qty* > 0. Otherwise, product is considered as *Out of Stock*.
 - **Qty only** - Product is considered to be *In Stock* if product *Qty* is > 0. Otherwise, product is considered as *Out of Stock*.
- **Export Out of Stock Products** - According to product *Stock Status* defined by the option above you can choose whether you want to export *Out of Stock* products or not.

* *Qty* means *Quantity*.

The screenshot shows the Magento Admin Panel interface. The top navigation bar includes 'Dashboard', 'Sales', 'Catalog', 'Koongo', 'Mobile', 'Customers', 'Promotions', 'Newsletter', 'CMS', and 'Ult'. The main content area is titled 'Koongo Connector - Edit Profile 'adasd' (ID: 94)'. Below this, there are tabs for 'General', 'Feed details', 'Product filter', and 'Attribute filter'. The 'Attribute filter' tab is active. Underneath, there are two sections: 'Stock Filter' and 'Visibility Filter'. The 'Stock Filter' section is highlighted with a red border and contains two dropdown menus: 'Stock status dependence' set to 'Stock status only' and 'Export Out of Stock Products' set to 'Yes'. The 'Visibility Filter' section contains a 'General Product Visibility' section with two checked options: 'Not Visible Individually' and 'Catalog'.

Manage Stock = No

In some cases the stock management may be disabled in *System Configuration Inventory Manage Stock*. In this case all products are considered as *In Stock*:

- *Manage Stock = No* and *Stock status dependence = Stock status only* Product is considered as *In Stock*.

- *Manage Stock* = No and *Stock status dependence* = Stock status and Qty Product is considered as *In Stock* (even if Qty 0).
- *Manage Stock* = No and *Stock status dependence* = Qty only Product is considered as *In Stock* (even if Qty 0).

Visibility filter

This filter is useful in combination with *Product filter* in tab 3. If you display in your frontend only parent products but you prefer to have child products in XML file (or in the opposite way), *Product filter* and *Visibility filter* are the places of your interest.

- **General Product Visibility** - Default setup is in the most cases the most appropriate.
- **Parent Product Visibility** - Default setup is in the most cases the most appropriate.

The screenshot shows the 'Koongo Connector - Edit Profile' configuration page for profile 'testing' (ID: 79). The 'Attribute filter' tab is highlighted with a red box. Below the tabs, the 'Stock Filter' section has 'Export Out of Stock Products' set to 'No'. The 'Visibility Filter' section contains two groups of options: 'General Product Visibility' and 'Parent Product Visibility'. Each group has four radio button options: 'Not Visible Individually', 'Catalog', 'Search', and 'Catalog, Search'. In both groups, 'Catalog, Search' is selected. At the bottom, the 'Attribute filter' section is titled 'Attribute filter (leave blank for all products)' and contains the text 'If ALL of these conditions are FALSE:' followed by a plus icon in a circle.

Attribute filter

Check connector configuration

Some attributes are disabled by default and thus they are not visible in *Attribute filter*. You may enable them in connector configuration page - navigate to *Koongo Connector Configuration* option *Disabled Attributes for Product Filters*.

Attribute filter is advanced feature which allows you to limit product selection based on specified attribute values..
