

## Configurable & Grouped products

- Price/minimal price is equal to the price of cheapest variant/child product.
- The configurable product is in stock if at least one variant/child product is in stock.
- Quantity is calculated as sum of variant/child product quantities.

## Bundle products

- Price/minimal price is calculated as a sum of required options price(min price).
  - Option price is equal to price of the cheapest option item.
- Bundle product is in stock if at least one item of each required option is in stock.
- Bundle product quantity is equal to own option with the lowest quantity.
  - Radio button/select options -> Option quantity calculated as a sum of option item quantities.
  - Checkbox/multi-select options -> Option quantity calculated as a minimum of option item quantities.

## Advanced product filtering

- Filters based on price scope, stock, availability, product type, category or any product attribute.

## Shipping costs export

- You can define rules for [shipping costs export](#).

## Custom feed layouts

- Define your specific layout XML file using [built-in feature](#) or [order Custom Feed Development](#).

## Plugin directory

- Plugins add specific functionality to Koongo Connector that may be usefull for some Koongo users. In other words, plugins allow seamless communication between Koongo Connector and 3rd party modules within the same Magento instance. See the [complete list of available plugins](#).

## General features

- support for ALL Magento product types
- [automatic generation](#) with cron - setup time and frequency
- manually generation by clicking on *Generate now* button
- full support for Magento multi-website/multi-store architecture
