XML/CSV Feed Preview

Preview show first few products from exported feed file. Thus you can check exported feed XML/CSV/TXT file directly at your Magento backend.

You can also:

1. Follow instructions at tab *Submission Manual* and submit feed to given channel. See more information below.
2. Adjust submission via FTP to the remote server. Just click button *FTP Submission*. For detail please see [Ftp Submission](#).
3. Download feed file and open it in some file editor, in order to see all exported products.
4. Edit profile setting, if feed contains wrong values or some elements/columns are empty. Just click button *Edit Profile #X*.

Submission Manual

Submit your feed file!

Koongo Connector provides you *Feed Files* specific to all supported channels and marketplaces. *Feed Files* are XML, CSV or TXT files containing all your product data. That means once you set up given channel in Koongo interface you need to upload the generated *Feed File* using FTP or to instruct given channel authority to download the *Feed File* over HTTP protocol.

Usually, channels provide two ways how to upload product data:

- You copy Feed URL address and paste it into a channel (usually there is feed upload/adjustment section at merchant account of the channel). This address you may find in *Feed Preview*. For details see info above.
- You can upload *Feed File* using FTP. See [FTP Submission](#) for details.

Note that for *Feed File* submission you need to have a merchant account with given channel authority. In *Feed Preview* click tab *Submission Manual* for further instructions on how to proceed with feed submission:
